

The `aidisclose` package

João M. Lourenço

<https://github.com/joaomlourenco/aidisclose>

2025-12-25 (v1.4.0)

1 Introduction

`aidisclose` is a LaTeX package providing a standardized, transparent mechanism for declaring the use of Generative Artificial Intelligence (GAI) tools in academic, technical, and professional documents.

The package is designed to support emerging ethical, institutional, and publisher requirements concerning AI-assisted content creation. It implements the *GAIDeT (Generative AI Delegation Taxonomy)*, as proposed by Suchikova et al. 2025 [1].

This package allows authors to:

- Select specific tasks delegated to AI from the predefined taxonomy (e.g., idea generation, data cleaning, text summarization).
- List the specific GAI tools used (e.g., ChatGPT, Gemini, Claude).
- Add optional explanatory comments (numbered or unnumbered).
- Automatically generate a formatted “Disclosure of Delegation to Generative AI” section, including the necessary responsibility statements.

2 Usage

To use the package, load it in your document preamble:

```
\usepackage{aidisclose}
```

The declaration process consists of two steps: **Configuration** (defining what was done) and **Rendering** (printing the declaration).

2.1 Configuration

Configuration commands can be placed in the preamble or anywhere in the document body before the rendering command is called.

2.1.1 Activating Taxonomy Items

Use the `\GAIactivate{<key>}` command to check specific items in the taxonomy. A full list of available keys is provided in Section 3.

```
% Example: Activating "Idea generation" and "Code optimization"  
\GAIactivate{c:idea}  
\GAIactivate{s:opt}
```

2.1.2 Specifying Tools

Use the `\GAItoolsUsed{<list>}` command to list the AI tools employed. The package automatically formats the output sentence based on the number of tools provided (handling singular/plural forms and commas).

```
% Example 1: No tools used  
\GAItoolsUsed{}  
  
% Example 2: One tool  
\GAItoolsUsed{ChatGPT-4}  
  
% Example 3: Multiple tools  
\GAItoolsUsed{ChatGPT-4, Gemini Advanced, Claude 3}
```

2.1.3 Adding Comments

If you need to provide additional context, use the `\GAIcomment` environment for numbered comments, or the starred `\GAIcomment*` environment for unnumbered comments.

```
% Numbered comment (increments counter)  
\begin{GAIcomment}  
    The AI was used primarily for refining the code in Section 3,  
    but the algorithm logic was derived manually.  
\end{GAIcomment}  
  
% Unnumbered comment
```

```
\begin{GAIcomment*}
    No confidential data was shared with the AI tools.
\end{GAIcomment*}
```

2.1.4 Customizing the Title

You can change the default title of the declaration section using `\GAIdiscloseTitle`.

```
\GAIdiscloseTitle[Short Title]{Full Title for the Section}[section-level]
```

The last (optional) argument `section-level` defaults to `\chapter` if defined (e.g., in book-like documents), otherwise defaults to `\section`. You can pass `none` to skip automatic title generation entirely.

You can also retrieve the stored titles manually if needed:

```
\GAIdiscloseTitleLong % Prints the full title
\GAIdiscloseTitleShort % Prints the short title
```

2.1.5 Customizing Appearance

You can customize the font size of the checklist and the symbol used for checkboxes.

```
\GAIsetChecklistFontSize{<fontsize>}
```

- **Mandatory Argument:** The font size to use while printing the checklist. The default is `\smaller`, which means “*slightly smaller*”.

```
\GAIsetCheckmarkSymbol{<symbol>}
```

- **Mandatory Argument:** The symbol to display inside checked boxes. The default is `\checkmark` (✓).

2.2 Rendering the Declaration

To print the final declaration, use the `\GAIrenderDeclaration` command at the desired location in your document. For papers/articles, you may consider placing it before or after the references. For thesis/dissertations, please follow your University/School rules.

```
\GAIrenderDeclaration[<checklist_ncols>]{<Author Names>}
```

- **Optional Argument** ([`<checklist_ncols>`]): The number of columns used while printing the checklist. The default is 3 columns.

- **Mandatory Argument:** A comma-separated list of author names submitting the declaration.

You can also use the **starred form** `\GAIrenderDeclaration*` to render the declaration **without** the section title (useful if you want to manage the heading manually).

Example:

```
% Standard rendering with title
\GAIrenderDeclaration[1]{Jane Doe, John Smith}
```

```
% Rendering without title
\section*{AI Disclosure}
\GAIrenderDeclaration*[2]{Jane Doe}
```

3 Taxonomy Keys

The following keys correspond to the specific tasks defined in the GAIDeT taxonomy [1]. Use these keys with the `\GAIactivate{}` command.

| Key | Description |
|-----------------------------|---|
| Conceptualization | |
| c:idea | Idea generation |
| c:objective | Defining the research objective |
| c:rq | Formulating research questions and hypotheses |
| c:feas | Feasibility assessment and risk evaluation |
| c:pretest | Preliminary hypothesis testing |
| Literature Review | |
| l:search | Literature search and systematization |
| l:write | Writing the literature review |
| l:patents | Analysis of market trends/patent environment |
| l:gaps | Novelty evaluation and gap identification |
| Methodology | |
| m:design | Research design |
| m:protocols | Experimental or research protocols |
| m:methods | Selection of research methods |
| Software Development | |
| s:codegen | Code generation |
| s:opt | Code optimization |

| | |
|---------------------------------|---|
| s:auto | Process automation |
| s:algs | Algorithms for data analysis |
| Data Management | |
| d:collect | Data collection |
| d:validate | Validation |
| d:clean | Data cleaning |
| d:curate | Data curation and organization |
| d:analyze | Data analysis |
| d:viz | Visualization |
| d:repro | Reproducibility testing |
| Writing and Editing | |
| w:textgen | Text generation |
| w:proof | Proofreading and editing |
| w:summarize | Summarizing text |
| w:concl | Formulation of conclusions |
| w:tone | Adapting and adjusting emotional tone |
| w:translate | Translation |
| w:reformat | Reformatting |
| w:press | Press releases and outreach materials |
| Ethics & Supervision | |
| e:bias | Bias analysis and discrimination assessment |
| e:risk | Ethical risk analysis |
| e:compliance | Compliance monitoring |
| e:conf | Data confidentiality monitoring |
| sup:qa | Quality assessment |
| sup:trends | Trend identification |
| sup:limits | Identification of limitations |
| sup:recs | Recommendations |
| sup:pub | Publication support |

4

Jane Doe, John Doe, and Mary Doe declare the use of Generative AI in the research work and writing process of this document. According to the GAIDeT taxonomy,¹ the following tasks were delegated to Generative AI tools under full human supervision:

¹Suchikova, Y., Tsybuliak, N., Teixeira da Silva, J. A., & Nazarovets, S. (2025). GAIDeT (Generative AI Delegation Taxonomy): A taxonomy for humans to delegate tasks to generative artificial intelligence in scientific research and publishing. *Accountability in Research*, 1–27. <https://doi.org/10.1080/08989621.2025.2544331>

Conceptualization

- | | |
|---|--|
| <input checked="" type="checkbox"/> Idea generation | <input checked="" type="checkbox"/> Feasibility assessment and risk evaluation |
| <input checked="" type="checkbox"/> Defining the research objective | <input type="checkbox"/> Preliminary hypothesis testing |

| <input type="checkbox"/> Formulation of conclusions | <input checked="" type="checkbox"/> Press releases and outreach materials |

Ethics Review

- | | |
|---|--|
| <input checked="" type="checkbox"/> Bias analysis and discrimination assessment | <input checked="" type="checkbox"/> Monitoring compliance with ethical standards |
| <input checked="" type="checkbox"/> Ethical risk analysis | <input type="checkbox"/> Data confidentiality monitoring |

Supervision

- | | |
|---|--|
| <input type="checkbox"/> Quality assessment | <input type="checkbox"/> Recommendations |
| <input type="checkbox"/> Trend identification | <input type="checkbox"/> Publication support |
| <input checked="" type="checkbox"/> Identification of limitations | |

Generative AI tools used: ChatGPT-5.2, Gemini 3 Pro, Claude 4.5 Opus, and Perplexity 12.12.25.

Additional comment #1 The AI was used primarily for refining the code in Section 3, but the algorithm logic was derived manually.

Additional comment #2 This is a second additional comment!

Additional comment: This is a third additional comment! It is starred and, thus, not get a number. also, this comment is longer and, hopefully, will spill to the next line!

Additional comment #3 This is the third non-stared additional comment!
